

Pure +  
Steel

# Together we are strong With Pure Steel+

Pure Steel+ is the brand from Saarland's steel industry. The shared umbrella brand from celebrated premium steel manufacturers Dillinger and Saarlöhle. Our quality steel can be found in cars, railroad tracks, wind turbines and solar parks all over the world. It's also used in the aerospace industry and in the most innovative buildings from New York to Shanghai. Wherever quality truly counts. And in a wide variety of everyday objects, like paper clips, pens and shopping carts.

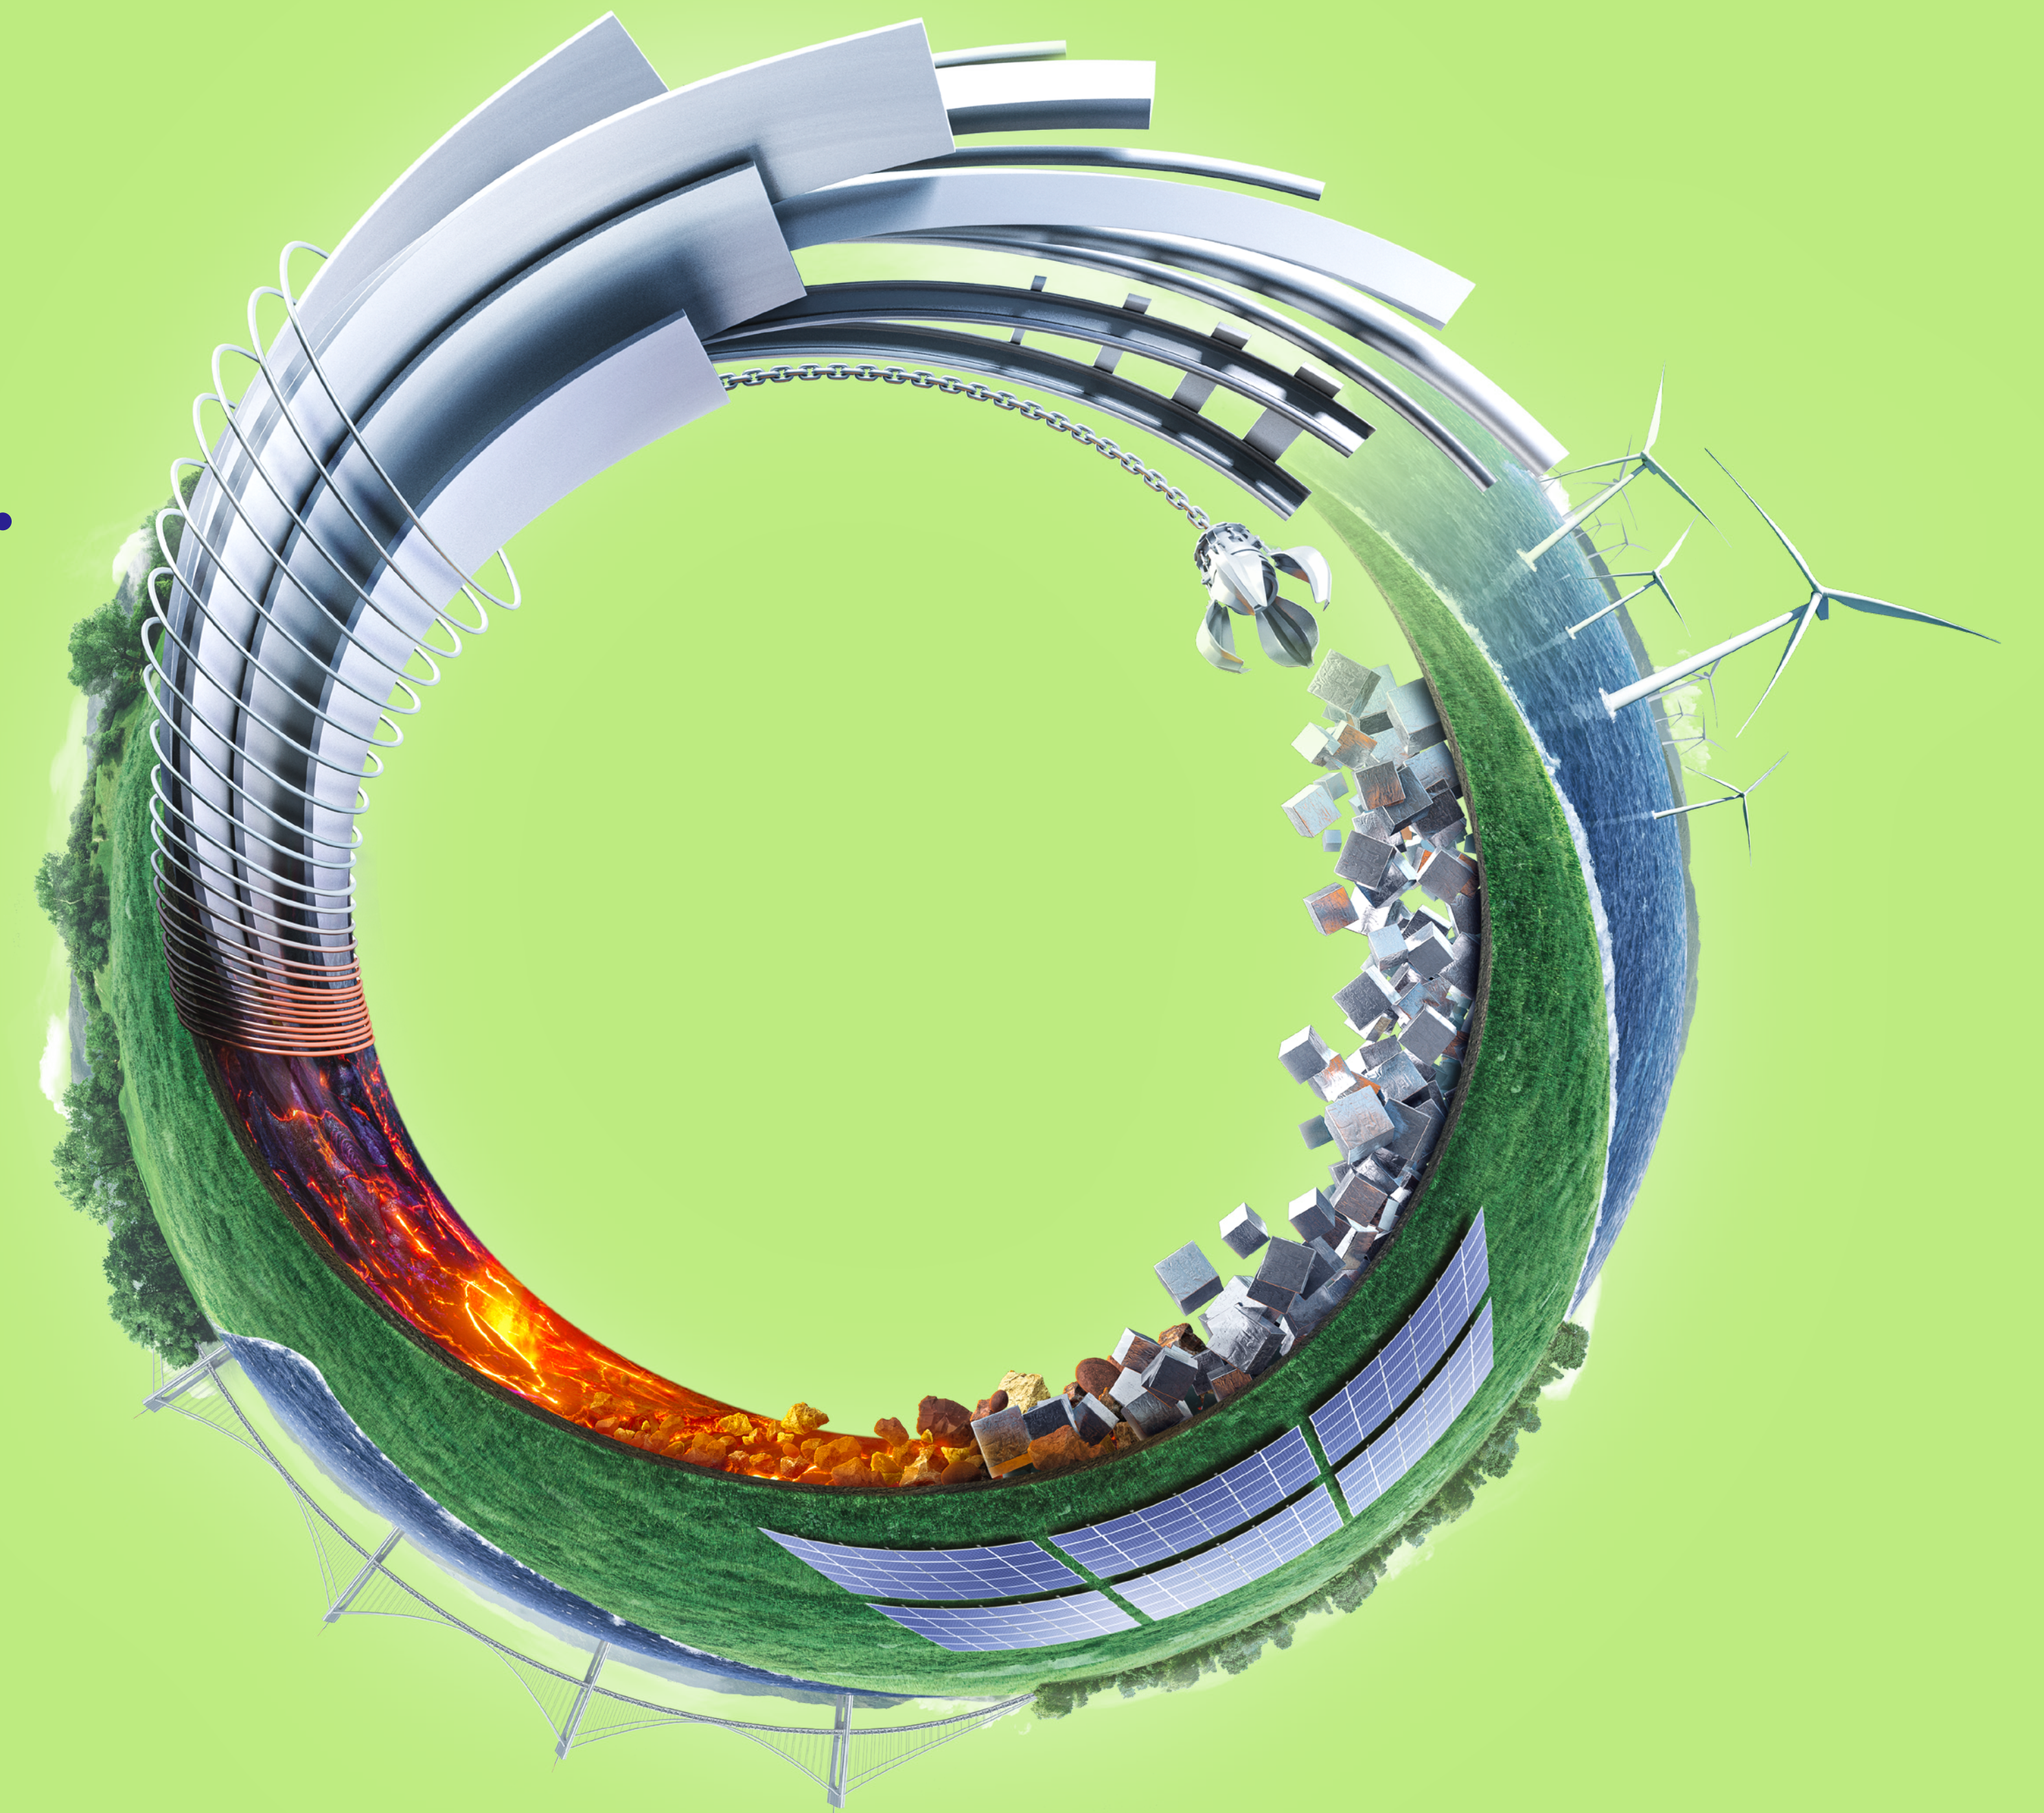

# For progress, climate, generations: **Pure Steel+**

---

**Pure innovation.** With intelligent, digital technology and the know-how of our experts, we at Dillinger produce innovative, sustainable heavy plate. **Pure quality.** You can build on our steel. As a partner to our customers, we develop excellent products for applications in key industries such as steel construction, mechanical engineering, and the energy sector. **Pure commitment.** Over the past 20 years, we have spent more than a third of our total investments at the Dillingen steel site on environmental protection projects. Now we want to significantly reduce carbon emissions. **Pure future.** Our products are already accelerating the energy transition, including in offshore wind turbines and in storage and solar power plants.

# Future made by us With Pure Steel+

With our decarbonization project Power4Steel, we are focusing on the use of hydrogen, on electric steel production, and on recycling steel scrap. A direct reduction plant (DRI) and one electric arc furnace (EAF) each are now slated for construction in Dillingen and Völklingen, which will enable the majority of our production to be carbon-reduced from 2030 on. A third EAF is to be built in a second phase by 2045 – for an annual total of 4.9 million tons of carbon-reduced crude steel. We are investing around EUR 3.5 billion in this and are receiving funding from the state, the federal government, and the EU.

# We are designers With Pure Steel+

Innovation has a home at Dillinger, with our centuries of experience and expertise in manufacturing special steels of excellent quality. Impressive examples of the diverse uses of Dillinger heavy plate can be found in numerous architectural masterpieces, including the Louis Vuitton Museum in Paris and the 30 Hudson Yards skyscraper in New York. Inquisitive and open-minded, flexible and focused on solutions – we are creating the future for generations to come. Together and for each other.

- **We are making big changes.**  
At our locations and for the world.
- **We are excited about what we do.**  
With strong commitment and innovative spirit.
- **We are transforming.**  
The energy and mobility transition is succeeding with our steel products.

# Future made by us.
